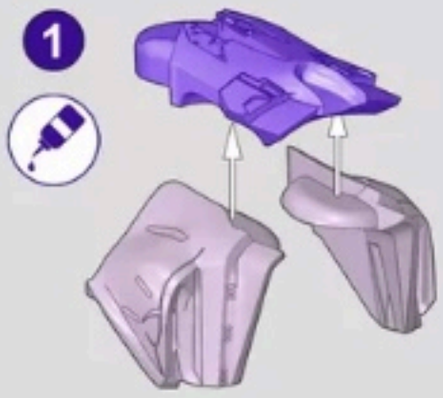
COVENANT PHANTOM Assembly Guide

(For a guide on magnetising components and advice on model kit customisation please see attached leaflet)

SIDE A

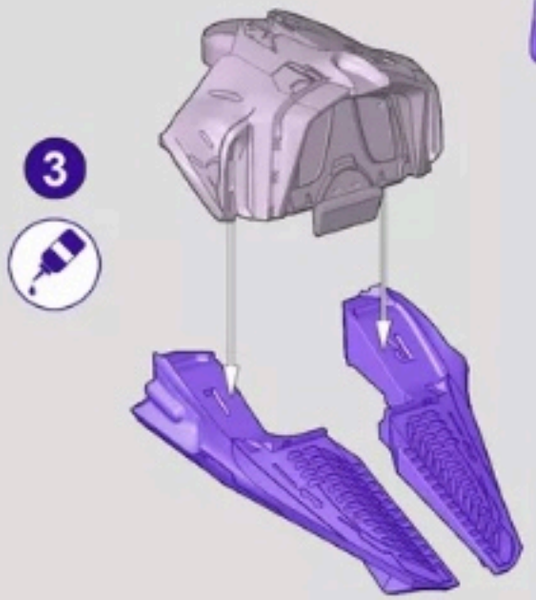
NOTE: The following steps demonstrate how to assemble your Phantom model with the side doors glued closed. Please see attached customisation sheet for alternative steps to assemble model with doors glued open.

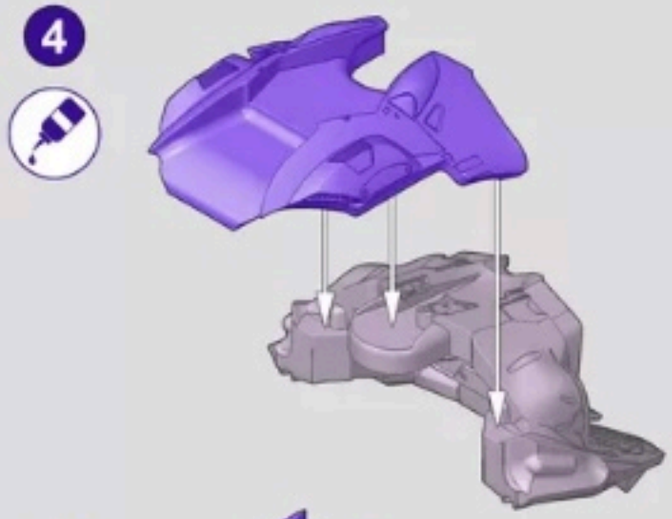


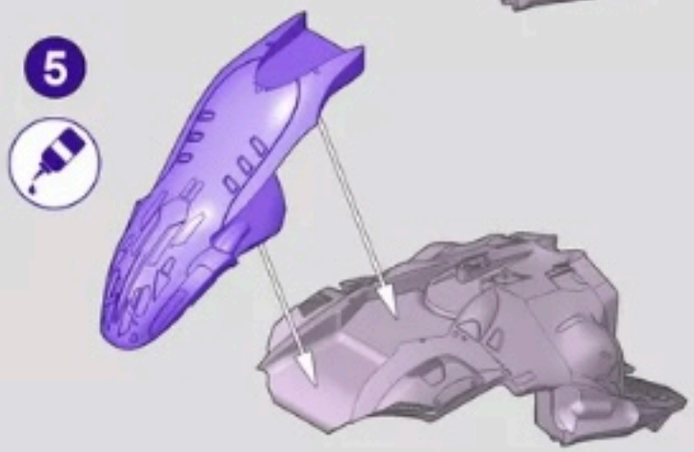
ATTENTION!

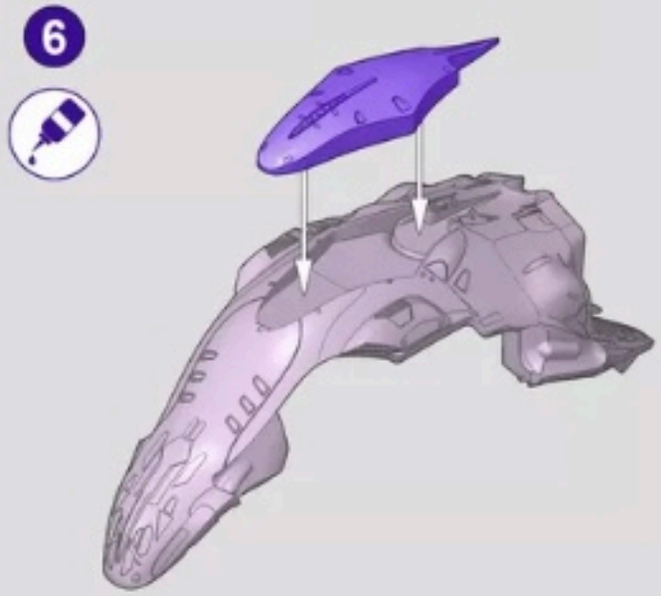
Test components for fit before applying glue.

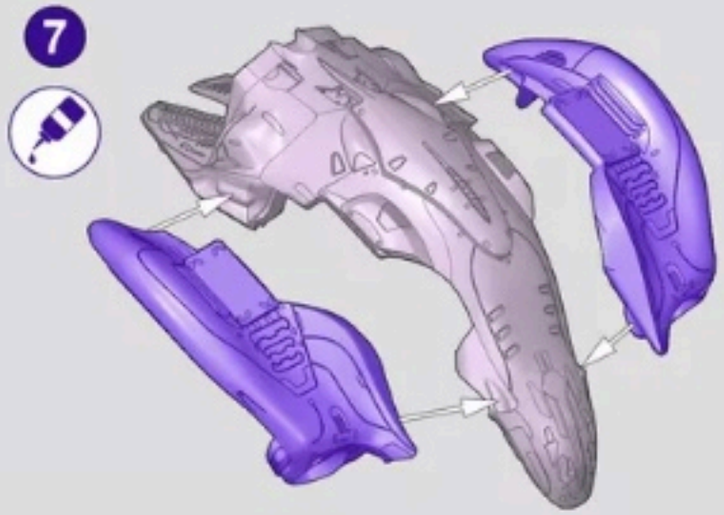
Some sanding and cleaning of surfaces may be required to ensure a clean assembly.

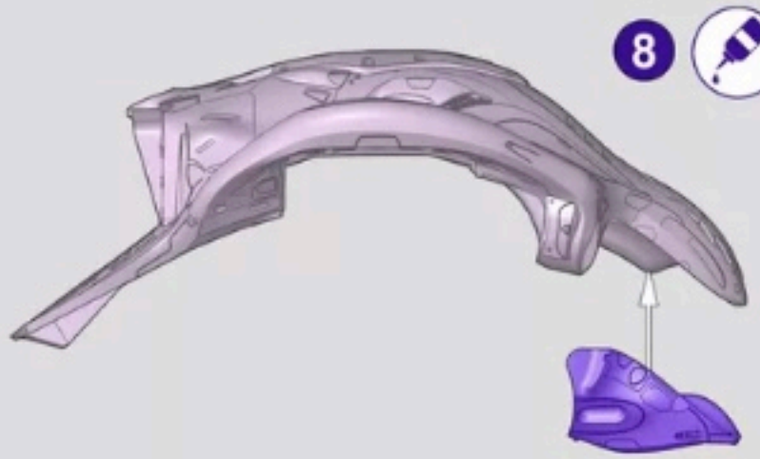


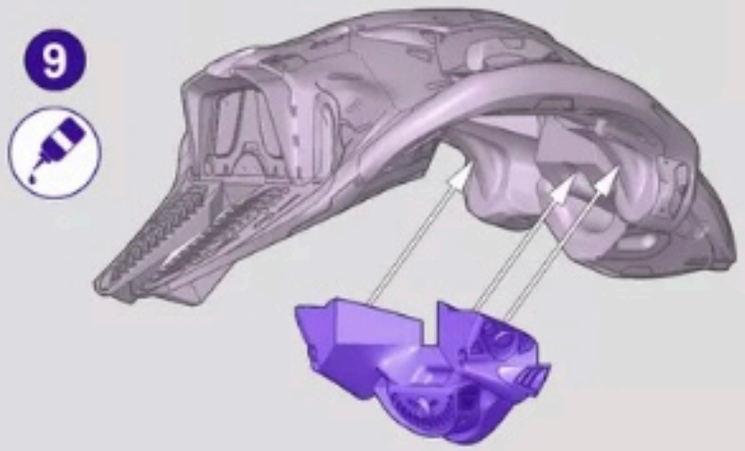












NOTE: The following steps demonstrate how to assemble your Phantom model with the side doors glued closed. Please see attached customisation sheet for alternative steps to assemble model with doors glued open.

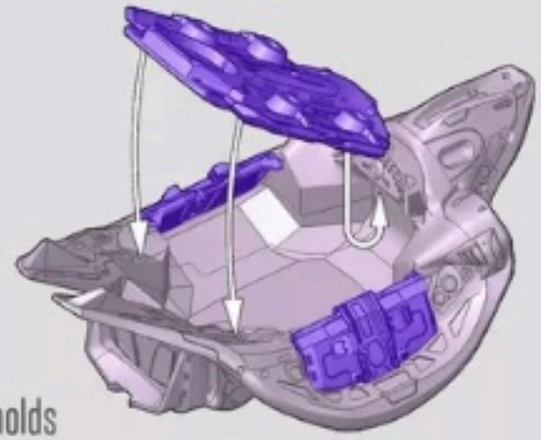
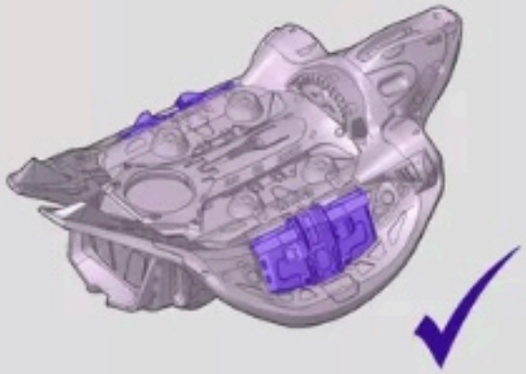
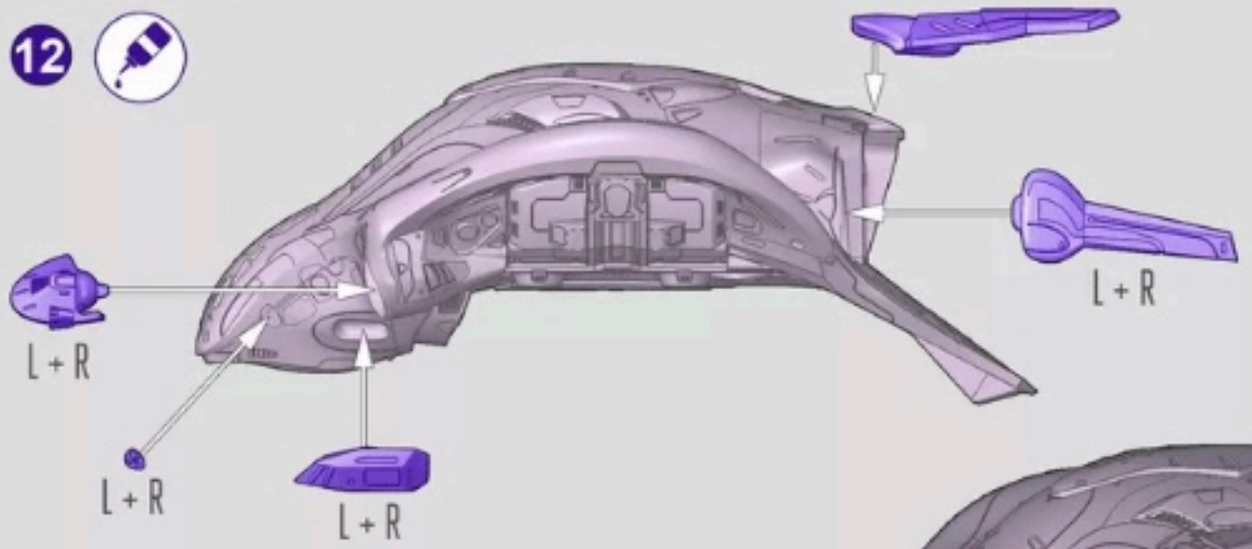
11

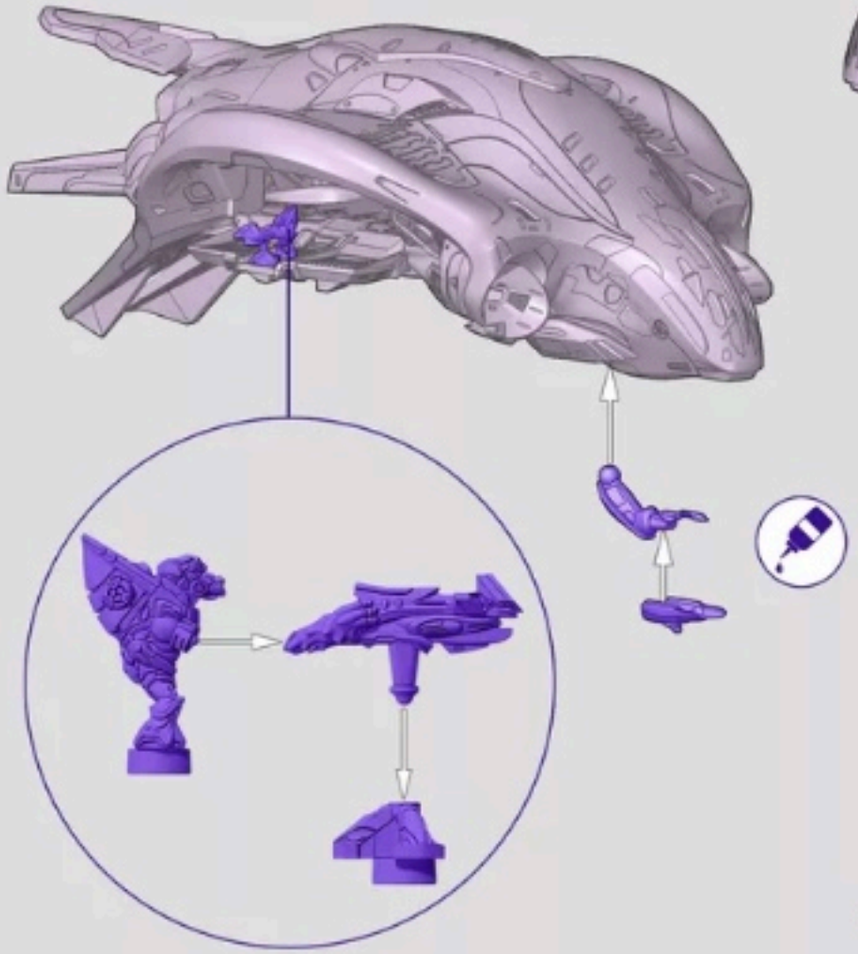


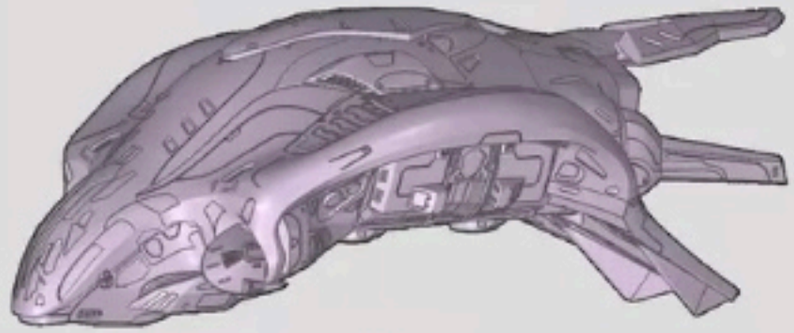
Floor plate holds doors in place.



12

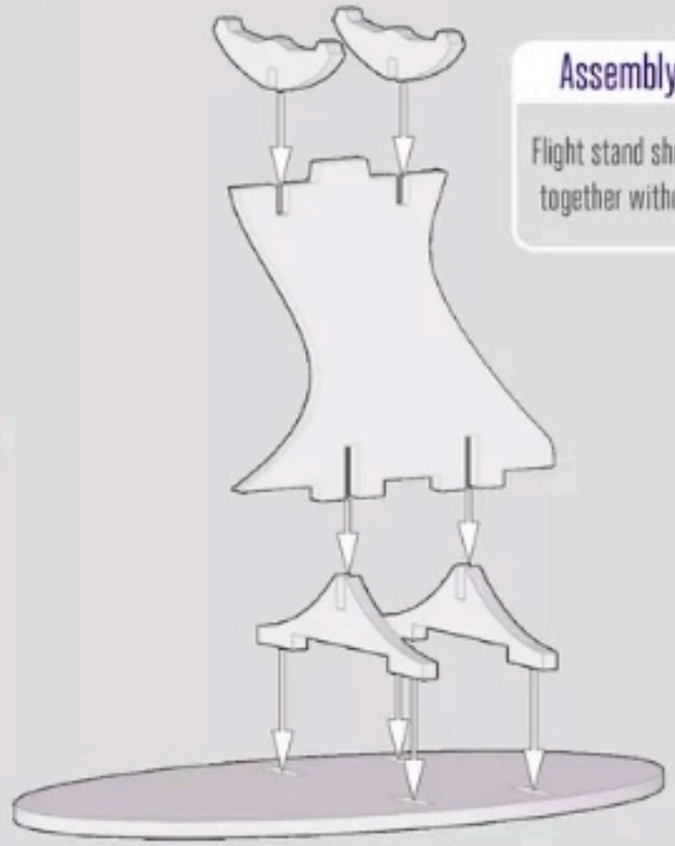






Assembly Tips

Use glue sparingly - a little glue goes a long way!



Assembly Tips

Flight stand should slide together without glue!

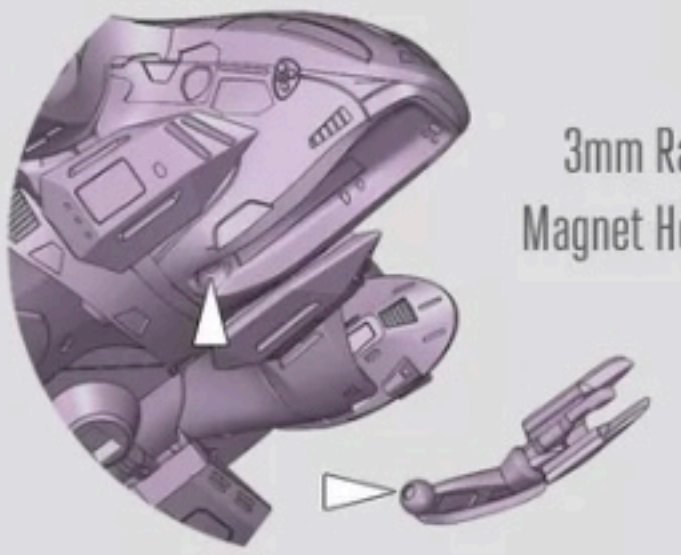
COVENANT Phantom Customisation Guide

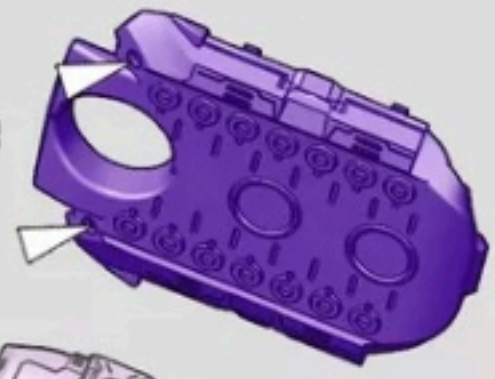
Magnetising Components

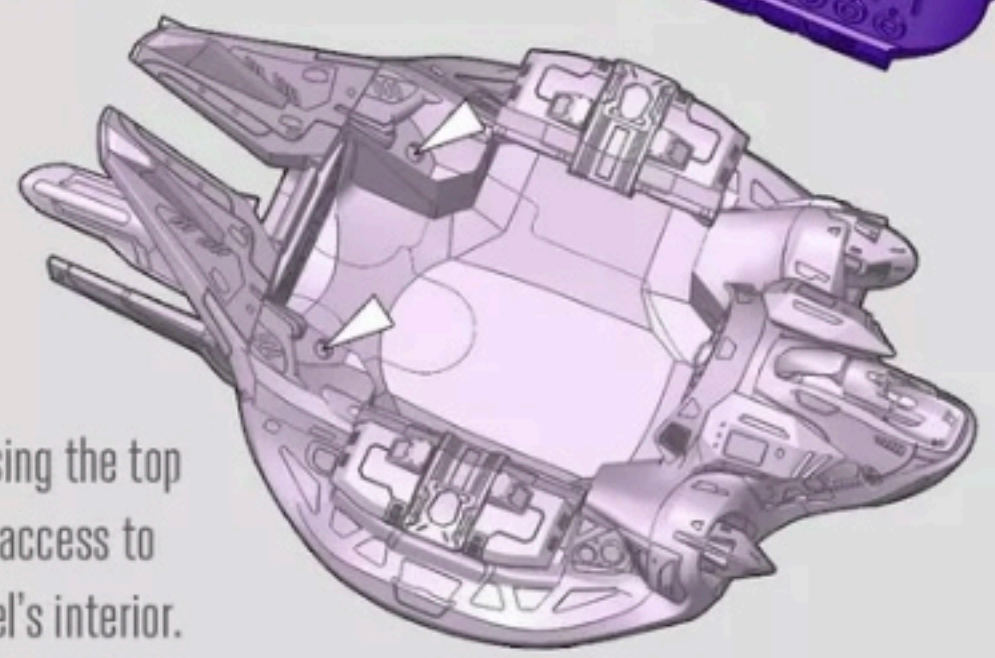
RARE-EARTH MAGNETS can be purchased separately and come in a variety of shapes and sizes.
This model has locations included in the design for both 3mm and 6mm round magnets. An example would be the Phantom's front Plasma Cannon. Magnetising this component allows it to swivel and can protect it from damage and breakage when compared to a fixed alternative.



3mm Rare-Earth
Magnet Hole Example

6mm Rare-Earth
Magnet Hole Example

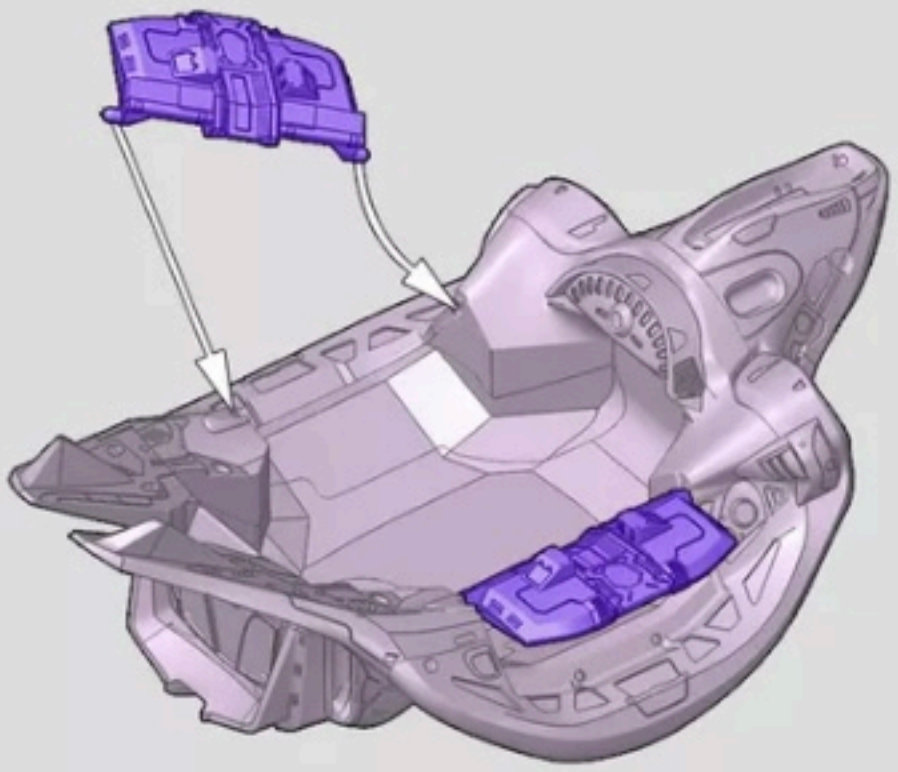




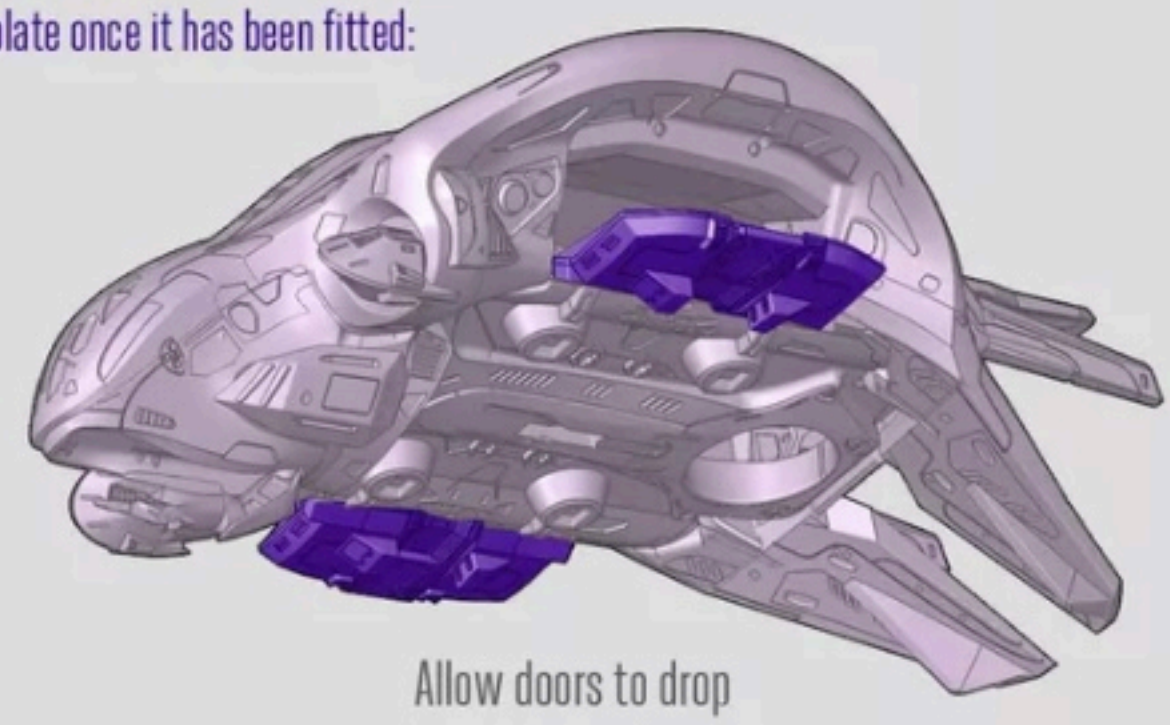
Magnetising the top
allows access to
the model's interior.

OPEN DOOR OPTION

Your Phantom model can be displayed with the side doors in either an open or closed configuration.
During step 11 of the assembly guide simply allow the doors to rest against the floorplate once it has been fitted:



Fit door pins
into holes first
(without glue)



Allow doors to drop
and rest against floorplate
(or optionally glue into place)

Mounting Infantry Inside Your Phantom

An array of mounting sockets have been provided on the top side of the inner deck of the model.
Infantry can be glued into these positions allowing them to be visible if you have the doors open.
